RESEARCH INTERESTS

Dust Life Cycle & Interstellar Medium
I am interested in studying the evolution of interstellar dust with multiwavelength observations. One of my projects is measuring the spatially resolved dust-to-metals ratio in the nearby galaxies, and interpreting the results with dust chemical evolution models, simulations and ancillary data.

HI 21 cm Line & Radio Astronomy
The distribution of neutral gas is a key element in dust sciences and cold gas dynamics. The HI 21 cm line traces neutral hydrogen atoms in the ISM. I reduced new HI 21cm line data of ∼30 galaxies observed by VLA with CASA. These new data allows us to construct a new dust-to-metals ratio survey in the nearby galaxies.
